DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 3749

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Joshi (6,029,910) in view of Joshi (5,199,866). Joshi '910 discloses a burner including substantially all of the claimed limitations. Joshi '910 discloses, among other things, a burner nozzle (see at least fig. 2), an inner conduit 18, an outer conduit 54 concentric around the inner conduit, an inner pipe 14, an outer pipe 12, wherein the nozzle is free of any external barrier downstream of the nozzle, the inner piece being longitudinally translatable with locking means (at least inherently capable of such function via threading 30,64,98 – it is also apparent from at least the structure depicted in fig. 2 that the claimed 1st and 2nd extreme positions may be accomplished). Joshi '910 does not specifically recite the nozzle tip design configuration. Joshi '866 teaches an adjustable burner specifically reciting that “the various flow dimensions are designed based upon experimental knowledge of fuel and oxygen, flow velocities, range of velocity adjustments needed, turbulence level, acceptable in flows, and flame characteristics of the co-flowing oxygen/fuel streams ... particular, the rounding of the forward end” (see at least col. 6, lines 2-22). Accordingly, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have incorporated the claimed tip arrangement into the invention disclosed by Joshi '910 as taught by Joshi '866, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable arrangement involves only routine skill in the art. *In re Aller*, 105 USPQ 233.
